Chapter 1

The importance of understanding DI-barriers

Why this guide matters

‘Many VET schools want to improve inclusion but struggle to move from broad themes to the specific, actionable steps that **truly support students**. This guide bridges that gap’

About This Guide

This guide has been made as a part of the Erasmus+ funded project *A Micro-Survey Framework for Inclusion and Diversity in Vocational Education (2023-2025)*. The project's objective being to create a question framework for identifying barriers to inclusion and diversity in vocational education and training (VET) schools, with five participating VET schools across Europe. The guide is a part of the project's work package 5 where the aim is to *create a comprehensive, actionable resource that empowers VET schools across Europe to effectively identify and remove barriers, creating more inclusive and diverse learning environments for all students.*

See [KA220-VET-4834222B](#) for further information about the project.

Organisations participating in the VET DI Project:

Research and technology partners: Xarxa Formació Professional (ES), StudentPulse (DA)

The Concepts of Diversity & Inclusion

According to OECD's recent publication *Equity and Inclusion in Education: Finding Strength through Diversity (2023)*, "defining the key concepts in the area of **diversity**, equity and **inclusion** in education is no easy undertaking" as "these concepts vary not only across literature, but also in the meaning that different education systems attribute to them". Furthermore "most countries and education systems have developed their own definitions, which reflect their history, priorities and educational goals".

However, as the objective of this project is to *create a shared question framework for identifying barriers to inclusion and diversity*, a frame of reference is needed. Hence, we've decided on the following definitions of the two concepts when discussing diversity and inclusion in a VET context.

Diversity

We define *diversity* as the representation and acknowledgment of various backgrounds and characteristics among students, including (but not limited to) ethnicity, socioeconomic status, language, cultural heritage, mental health and abilities.

Inclusion

We define *inclusion* as creating educational environments where students, regardless of diverse backgrounds or circumstances, are valued, supported, and given equal opportunities to participate and succeed with their education.

Diversity & Inclusion and its Link to Student Drop-outs

The link between barriers and drop-outs

So why is it that understanding diversity and inclusion barriers is of relevance at all? Looking besides the human aspect that should be enough in itself - that every individual should be treated fair and equally - societal and financial incentives exist as well. Understanding and reducing student drop-out is guideedly a priority of the five schools participating in the project, but also a strategic priority to the European commision with a 2023 target of reducing the early school-leaving rate to 9%. Adding to this that the most commonly guideed reasons for VET learners dropping out are low overall education achievement and attendance, health and well-being issues, and lack of family engagement and support - and negative self-perception and self-esteem, as well as gender, and migrant or ethnic minority background - it becomes obvious that proactively understanding and reducing these barriers of students' success (and graduation) can have a great impact on not just the schools being a part of this project but the educational sector in general.

Remembering it's not just about the at-school experience

While there is a well-developed culture of inclusion in school-based learning settings, there is more uncertainty in work-based learning environments. Information and data on work-based learning are scarce, and many factors leading to early leaving from these settings remain unknown. Findings suggest the need to cultivate an inclusion culture in work-based learning settings and implement effective policies to support apprentices at risk of dropping out.

Chapter 2

Understanding the Barriers

Issues your students might be facing

The 'Big Four' Barriers

The project's foundational analysis, which involved asking school representatives from the five partner schools to describe the most important themes to address, revealed a clear pattern of common challenges. While many local issues were identified, four major categories of barriers consistently emerged as central to the student experience across all countries: Social barriers, Economic matters, Mental health, and Learning issues. These "Big Four" barriers form the core of the DI-VET framework and represent the most pressing, shared challenges impacting student success.

Alongside these, two other themes were highlighted as having a strong presence but with greater variety across the different national contexts: Family issues and Commuting (logistic issues). The analysis showed that while these factors are significant, their specific nature and impact can differ greatly from one region to another, underscoring the need for a framework that is both unified in its core focus and flexible enough to adapt to local realities.

Social Barriers

Among the most frequently cited issues, covering everything from bullying and difficult peer relationships to a general feeling of not belonging.

"I get bullied most days for pointless reasons"

Learning Issues

Include difficulties with concentration and mismatches between teaching styles and student needs. These barriers often intersect, as social distress can make academic focus nearly impossible

"Depends on the teacher; some teachers have boring lessons, and then I can't focus"

Family

Lack of support or the emotional impact of a parent working abroad, can profoundly affect a student's life.

"My father was away and I had an emotional impact"

Economic Pressure

Financial pressures from affording materials, transport, or simply managing on a low income can be a significant distraction from education.

"There's no money for anything on a student salary"

Mental Health

Encompassing struggles with well-being, stress, and anxiety.

"I get bullied most days for pointless reasons"

Logistics

Long travel times and early start hours create significant daily hurdles.

"Classes start so early, and after classes, I have to wait an hour for the bus home"

Beyond the Obvious: The Nuances and Context of Student Barriers

While the 'Big Four' barriers provide a clear starting point, the project shows that the challenges VET students face are rarely simple. Understanding these complexities is the first step toward providing meaningful support. It's crucial to move beyond generalisations and see the student as a whole person, acknowledging that it would be a "huge misunderstanding" to treat all students as if their experiences are the same.

Internal vs. External Factors

Barriers are not just about what happens at school; they are a mix of internal feelings and external circumstances that vary greatly from one student to another.

External Barriers are driven by outside factors. These can include financial issues, transportation problems, or family situations that impact a student's ability to focus on their education. One student from Romania, for example, noted the impact of a parent working abroad: "My father was away and I had an emotional impact".

Internal Barriers are found within the student. These can range from mental health issues to learning difficulties and low self-perception. A student from Estonia explained how their concentration is affected by their own internal state: "Sometimes I'm just tired and don't feel like doing anything".

Beyond the 'Typical Student'

It is easy for schools to define a "typical student," often imagined as a 15-16 year old boy pursuing a specific trade. However, our research and student feedback show a vast amount of variety exists. Subgroups ranging from gender minorities in specific programmes to students with learning disabilities or those facing socialisation barriers experience challenges unique to their individual situations. One student highlighted this complexity, stating: "When some teachers don't really know how to teach, and with my ADHD, I find it hard to concentrate". Another comment shows how a student's personal history affects their present: "Because of past traumas, I've encountered an illness that makes me lose my concentration constantly". Treating all students alike overlooks these critical nuances.

Barriers in the Classroom vs. the Workplace

While the school environment has many challenges, the project's analysis shows students face a different, often more intense, set of barriers during internships. Understanding this distinction is crucial for providing holistic support throughout a student's entire VET journey. While school-based settings often have a well-developed culture of inclusion, there is more uncertainty in work-based learning environments, which need their own inclusion culture to support apprentices at risk of dropping out.

Classroom Challenges: Social Dynamics and Learning Environment

In the classroom, barriers are often related to social dynamics and the immediate learning environment. Issues like disruptive behaviour, noise, and lack of focus are frequently mentioned by students as significant hurdles to concentration. One student from Romania highlighted how a peer's distress could impact the whole class: "...she starts to cry because she doesn't know how to solve the exercises and manages to distract us...". Similarly, a student from Spain identified disruptive classmates as a key problem: "...not having such annoying classmates...". These comments reveal how the classroom is a microcosm where peer behaviour and teaching styles directly influence a student's ability to learn.

Workplace Barriers: Professional Expectations and Practical Realities

During internships, students face an entirely new set of challenges that are more practical and professional in nature. A Danish student pointed out a severe mismatch between their education and their placement: "0, my apprenticeship is not relevant for this education. We don't do any electronics. If something is defective, it is thrown out and new is installed". Another student noted the harsh realities of their work environment: "Poor working conditions on several points. Colleagues who speak badly to and about you behind your back to a large extent, stress at the workplace due to overbooking, management that won't listen to you...". These experiences underscore that the workplace introduces pressures related to professional relevance, interpersonal conflicts with colleagues, and the practical application of skills, which are distinct from the academic and social barriers found at school.

Chapter 3

The DI-VET Framework

Questions to ask to uncover barriers

Structures of the DI-VET Framework

The DI-VET questionnaire is more than just a list of questions; it is a strategic framework designed to provide VET schools with a clear, actionable, and student-centric way to measure and improve inclusion and diversity. Its structure is the direct result of the project's foundational research, which combined insights from school representatives, analysis of educational systems, and, most importantly, the voices of students themselves—tested across schools for more than a year and collecting more than 50,000 student attitudes, and 20,000 student comments.

The framework is built on a multi-layered approach to ensure it captures both a high-level overview and the specific, nuanced barriers that students face. Divided into four types of questions.

Types of Questions

Key Factors

At the highest level, the framework begins with two essential KPI questions that measure the core of DI. If you should ask two questions only these would be them, **Diversity**: "I feel that the school and my fellow students respect me for who I am." **Inclusion**: "I feel like I belong at this school." These questions provide a quick, high-level snapshot of the school's climate.

The 'Big Four' Barriers

The second layer dives into the specific barriers identified as the most common and critical across all five partner schools during the project's foundational research. The questions are organised into the four main themes that consistently emerged. Learning, mental health, social and economic barriers.

The Supporting Environment

This layer explores the wider ecosystem of support around the student. The project's research showed that factors beyond the "Big Four" have a significant moderating effect on a student's experience. Teacher interventions, outside school and family.

Local Measures

The final layer of the framework is intentionally left open for schools to add their own "unique focus" questions. This flexibility is essential for addressing specific local challenges that a unified framework cannot capture alone.

DI-VET Framework Questions*

KPIs

Diversity	
I feel that the school and my fellow students respect me for who I am.	

Inclusion	
I feel like I belong at this school.	

DI Barriers

Learning	
Awareness of Learning Support	If I am struggling with succeeding in my classes I know how I can get support.
Concentration in Class	I can concentrate in class.
Course Difficulty level	The difficulty level of my courses suits me.

Mental Health	
Awareness of Mental Health Support	When I feel bad, I know who to talk to.
Everyday Life Happiness	Most days I am feeling happy at school.
Personal Resources	When I feel pressured I am capable of managing my way through.

Social	
Awareness of Social Support	If I am experiencing bullying or other issues with my fellow students I know what to do.
Friends at School	I have friends at school.
Classmate Relationship	I get along with my classmates.

Economic	
Awareness of Financial Support	If I am feeling pressured by my economic situation, I know what I can do to...
Family Economy	My family's economic status doesn't worry me.
Economic Control	I have control over my financial situation, so I can concentrate on my education.

Other

Teacher Intervention
I trust that the teachers will deal with problems if they appear.

Outside School Wellbeing
My everyday life is trouble-free when I am not at school.

Family Support
I feel that my family supports my studies.

Local

Unique focus
Identify additional questions by interviewing 5-10 students.

*All questions were asked on a scale from 0-10, ranging from strongly disagree → strongly agree, and followed up by the chance for students to elaborate on their score. **Please notice that all questions should not necessarily be asked to students to uncover DI-barriers. Rather, the framework serves as a catalogue of questions, with proved impact, that schools can choose from, reflecting their situation.

DI-VET Framework Questions*

Focus	Question text	Metric
KPI: Diversity	I feel that the school and my fellow students respect me for who I am.	0 = Strongly disagree / 10 = Strongly agree
KPI: Inclusion	I feel like I belong at this school.	0 = Strongly disagree / 10 = Strongly agree
Learning	If I am struggling with succeeding in my classes I know how I can get support.	0 = Strongly disagree / 10 = Strongly agree
Learning	I can concentrate in class.	0 = Strongly disagree / 10 = Strongly agree
Learning	The difficulty level of my courses suits me.	0 = Strongly disagree / 10 = Strongly agree
Mental health	When I feel bad, I know who to talk to.	0 = Strongly disagree / 10 = Strongly agree
Mental health	Most days I am feeling happy at school.	0 = Strongly disagree / 10 = Strongly agree
Mental health	When I feel pressured I am capable of managing my way through.	0 = Strongly disagree / 10 = Strongly agree
Social	If I am experiencing bullying or other issues with my fellow students I know what to do.	0 = Strongly disagree / 10 = Strongly agree
Social	I have friends at school.	0 = Strongly disagree / 10 = Strongly agree
Social	I get along with my classmates.	0 = Strongly disagree / 10 = Strongly agree
Economic	If I am feeling pressured by my economic situation, I know what I can do to...	0 = Strongly disagree / 10 = Strongly agree
Economic	My family's economic status doesn't worry me.	0 = Strongly disagree / 10 = Strongly agree
Economic	I have control over my financial situation, so I can concentrate on my education.	0 = Strongly disagree / 10 = Strongly agree
Teacher intervention	I trust that the teachers will deal with problems if they appear.	0 = Strongly disagree / 10 = Strongly agree
Outside school	My everyday life is trouble-free when I am not at school.	0 = Strongly disagree / 10 = Strongly agree
Family support	I feel that my family supports my studies.	0 = Strongly disagree / 10 = Strongly agree
Local	Your unique questions	0 = Strongly disagree / 10 = Strongly agree

*All questions were asked on a scale from 0-10, ranging from strongly disagree → strongly agree, and followed up by the chance for students to elaborate on their score. **Please notice that all questions should not necessarily be asked to students to uncover DI-barriers. Rather, the framework serves as a catalogue of questions, with proved impact, that schools can choose from, reflecting their situation.

Putting the Framework to a Test

One year of micro-surveys

To validate the DI-VET framework, the project undertook one of the most extensive student feedback initiatives of its kind across five European VET schools. The goal was not just to create a theoretical model, but to test it rigorously in diverse educational and cultural contexts, ensuring the insights were both reliable and actionable. The scale of this testing phase provides a powerful foundation for the recommendations in this guide.

5,634 participating **students**

The project successfully engaged more than 5,000 students, ensuring a broad and representative sample from each of the five partner VET schools.

50,978 student **attitudes** uncovered

The total number of individual quantitative answers collected from students across all surveys, demonstrating a massive engagement with the framework's questions.

21,930 student **comments** provided

Nearly 22,000 qualitative comments were gathered, providing rich, unfiltered context behind the data and allowing the project to hear students' voices directly.

Putting the Framework to a Test

Student attitudes

Overall, the project-wide results show a generally positive student experience. The two core KPIs, Diversity ("I feel respected for who I am") and Inclusion ("I feel I belong at this school"), consistently scored high marks across all schools, indicating that most students feel welcome and valued.

However, the framework successfully pinpointed areas needing improvement. As an example, scores related to the Learning Environment were often positive, with students appreciating supportive teachers, but the data also consistently highlighted challenges. The student comments, in particular, **uncovered individual barriers** such as classroom distractions, bullying, a need for more practical lessons, and better mental health support, which general scores might have missed.

Chapter 4

Taking Action

A menu of DI support initiatives

A Menu of Support Initiatives

Understanding student barriers is the first step, but true impact comes from converting those insights into concrete action. The DI-VET framework is designed not just to gather data, but to bridge the gap between student feedback and tangible support, empowering schools to make positive, evidence-based changes. The project's findings reveal a dual pathway for action. On one hand, the framework uncovers systemic, recurring themes that point towards the need for broad institutional initiatives that can benefit all students. On the other hand, its innovative use of micro-surveys provides a powerful mechanism for proactive individual support, identifying and assisting students who might otherwise be hesitant to seek help.

Institutional Recommendations: Strengthening the Foundation

By analysing thousands of student comments and survey responses, clear patterns emerge, leading to recommendations for school-wide improvements. These initiatives address the root causes of common barriers and aim to enhance the learning environment for the entire student body. They range from improving classroom management and fostering a more inclusive social culture to increasing the visibility of mental health services and addressing economic pressures. These actions strengthen the school's overall capacity to support student well-being and success.

Proactive 1:1 Support: A Targeted Approach

A game-changing aspect of this project is its ability to move from a traditional, reactive support model to a proactive one. The framework enables schools to identify at-risk students through their survey responses and, with their consent, offer direct, personalised assistance. This has already resulted in 180 students across the partner schools receiving offers of one-to-one counselling and support tailored to their specific needs. This targeted intervention ensures that no student's voice is lost and that help is offered precisely when and where it is needed most.

A Menu of Support Initiatives

Institutional recommendations

From Insight to Action: A Menu of Student-Informed Initiatives

The DI-VET framework is not just a tool for measurement; its true value lies in its ability to translate student voices into actionable insights. By asking students directly about the barriers they face, the participating schools have uncovered a wealth of suggestions for strengthening the support they offer. These recommendations, coming directly from students, provide a clear roadmap for schools aiming to build more inclusive and effective learning environments.

The initiatives suggested can be grouped into several key areas, reflecting the multifaceted nature of student barriers: Academic Support & Teaching, Social Environment & Inclusion, Student Well-being & Resources and School Administration & Logistics.

A Menu of Support Initiatives

Institutional recommendations*

Social Environment & Inclusion			Academic Support & Teaching			Student Well-being & Resources			Social Environment & Inclusion		
Address bullying & harassment	Promote respect & acceptance	Improve peer relationships	Improve Teacher-Student Relationships	Curriculum & Teaching Methods	Learning Environment & Concentration	Mental Health Support	Financial & Economic Assistance	Specific Student Groups	Communication & Reporting	Scheduling & Workload	Facilities & Activities
Implement effective anti-bullying policies	Encourage acceptance of diverse interests/lifestyles (e.g., non-smokers)	Enhance communication and conflict resolution skills (workshops)	Encourage teachers to be more approachable/supervise	Provide additional support for difficult courses (especially Math)	Enhance classroom management (reduce noise/distractions)	Increase awareness and accessibility of mental health resources	Provide more information on available financial support options	Provide support for students with family members working abroad	Enhance communication channels for anonymous issue reporting	Consider starting school later (accommodate sleep patterns)	Improve quality/affordability of campus dining options
Increase awareness and intervention strategies	Address discrimination (e.g., based on ethnicity, social gender, sexuality)	Create clubs/activities based on shared interests	Improve communication channels (address pressure/stress)	Enhance teacher training for engaging/dynamic lessons	Ensure access to quiet study areas	Offer workshops on stress management and coping strategies	Increase financial support for students facing economic pressures/challenges	Ensure equal treatment for female students (male-dominated fields)	Improve communication about bullying prevention/reporting	Provide support for students overwhelmed by workload	Ensure access to diverse extracurricular activities
Provide information on handling conflicts	Foster inclusivity and diverse social activities	Facilitate cross-group activities/class outings	Enhance empathy and understanding from teachers (diverse backgrounds)	Offer more practical learning opportunities (balance theory)	Provide support for students with ADHD/dyslexia		Enhance support for students living independently (e.g., older students)			Offer more flexible scheduling options	Offer more outdoor activities/excursions
Improve teacher intervention/grip on bullying	Enhance respect among classmates and staff	Encourage open communication and acceptance among classmates	Provide individual support from teachers	Update teaching methods to be more interactive	Offer flexible learning options/pace		Address lack of understanding from teachers regarding financial situations			Reduce the length of school days	
				Provide personalized guidance for course difficulty						Facilitate discussions on balancing school/personal life	

*All recommendations are identified based on students' attitudes and comments and are NOT assessed based on their applicability. Whether an initiative can be implemented will vary from school to school (e.g. would 'Consider starting school later to accommodate sleep patterns' most likely not be applicable to many institutions—though students' answers indicate issues with it). See recommendations as **inspiration**.

A Menu of Support Initiatives

A targeted approach

The DI-VET framework is more than a tool for analysis; it is a catalyst for direct, personalised student support. By moving from a traditional, reactive model to a proactive one, the project has demonstrated a game-changing approach to student wellbeing. Instead of waiting for students to seek help, the framework empowers schools to identify those facing barriers and offer assistance directly.

This innovative use of micro-surveys has enabled schools to open a direct line of communication with students who might otherwise remain silent.

Over the course of the project, this student-centric approach has yielded significant results across the five partner schools.

A New Channel for Support

180 students who were identified through the surveys as facing significant barriers consented to be contacted and received offers of personal, one-to-one support. This confirms the framework's ability to reach at-risk individuals who may be hesitant to come forward on their own.

Diverse and Tailored Interventions

The support offered was not one-size-fits-all. It spanned the full spectrum of identified barriers, from academic and learning support like tutoring and special pedagogical assistance, to mental health and wellbeing through school counsellors and wellbeing consultants. It also addressed social and economic challenges by connecting students with extra guidance and institutional aid.

Building a Culture of Trust

By asking students directly and then acting on their feedback with consent, the framework helps foster a culture where students feel heard and trust that teachers will deal with their problems effectively. This shift from passive data collection to active intervention is the framework's most powerful outcome, providing a clear pathway from identifying a student's struggle to offering a helping hand.

A Menu of Support Initiatives

A targeted approach

Understanding and strengthening diversity and inclusion requires a dual focus: we must identify the barriers students face, but just as importantly, we must understand the landscape of support and initiatives available to help them overcome those challenges.

A cross the five participating VET schools, a total of 17 distinct support initiatives were identified. This catalogue of actions, shown on the right, offers a rich source of inspiration for any school looking to enhance its student support services.

An analysis of these initiatives reveals several key dimensions:

- **Varied Ownership:** There is a significant difference across countries in who is responsible for providing support. Some schools point primarily towards societal offers, such as governmental and public programmes, while others rely more heavily on internal, institutional support services like counsellors and tutors.

- **Direct vs. Indirect Support:** The initiatives also differ in how they support students. Some actions provide direct support to the student themselves, such as tutoring or counselling. Others offer indirect support by working with key stakeholders like parents and teachers to improve the student's environment.

This variety underscores that there is no single right way to provide support. Instead, it highlights a menu of possibilities that schools can explore to build a holistic and effective support system tailored to their students' specific needs.

Chapter 5

Getting Started

A simple plan to getting started with DI surveys & improvements

A five-step-plan

Making a real impact on diversity and inclusion requires moving from ambition to a structured process. This chapter provides a step-by-step roadmap for implementing the DI-VET framework, built on a continuous cycle of listening to your students, understanding their feedback, and taking informed action. The process begins with people. Securing commitment from school leadership and involving your entire team—teachers, counsellors, and students—is the essential foundation for success.

The key is to **start simple by launching a short micro-survey with baseline questions from the framework** to gather immediate, valuable data. The true innovation lies in what comes next: offering proactive, one-to-one support to students who indicate they face barriers and consent to be contacted. This is not a one-time task but an iterative cycle. By continuously listening, analysing, and acting, your school can build a more responsive and inclusive environment that puts student well-being at the centre of its mission.
